**CSTRI MULTIFUEL HOT AIR DRIER
(CAPACITY - 100 KGS GREEN MULBERRY COCOONS)**

SPECIFICATION:

1. The hot air drier consists of inbuilt heating system using coal / fire wood etc., turbo blower for inside air circulation, air inlet and outlet, cocoon rack and trays for holding cocoons. The drier is of dismantle type with different segments like bottom, top, sidewalls and front doors. Racks for keeping cocoon trays are also fixed in either side of the oven inside the drier.

Size of the drier is of 145 cm height (including 23 cm leg), 213 cm wide and 150cm depth. The drier consists of one inbuilt elongated oven with Cast iron grate of 122 cm length and 30 cm wide. The width of the oven is 33 cm and it is covered by a semi circular heating plate made out of 12 gauge MS sheet for radiation of heat inside the drying chamber. The drier is to be provided with two doors at front side measuring 80 cm x 119 cm with effective locking system hinged at three places top, middle and bottom of the door. Upper portion of the oven is usually covered with a segment made of plywood covered both sides with aluminium sheet. The door of the chamber shall be airtight by using heat resistant rubber beadings to withstand the temperature up to 200°C.

2. Two sidewalls, back wall, top cover and floor of the drier are made in separate segments. The segments are made in rectangular ribbed structure with size wood of 5 cm x 2.5 cm, the outer side of which is first covered with 6 mm thick ply board and then it is covered with 24 gauge aluminium sheet. The inner side of the segments is covered with 24-gauge aluminium sheet only. The segments such prepared are fitted in a rectangular of M.S. Angle of 35 mm x 35 mm x 5 mm. Sidewalls, back wall, top cover and doors are assembled on the floor of the drier and fixed with the help of nut bolts. The drier should be capable of maintaining initial maximum temperature of 120°C after loading the cocoons. The temperature uniformity should be $\pm 2^\circ\text{C}$.

3. Cocoon holding trays and trolleys: Cocoon holding trays shall be of 61 cm width x 122 cm length and 5 cm height. All the sides of the cocoon trays shall be made out of GI sheet of 16 gauge folded neatly and bottom of the tray shall be of 16 gauge galvanized iron (GI) mesh. All the side riveted with smooth surface and do not have sharp edges. 24 trays shall be housed inside the drying chamber in two racks (10 trays in each row). Dimension of each rack shall be 122 cm height x 64 cm width x 122 cm length and is made of 25 x 25 x 3 mm M.S angle.

4. Air circulation: Air circulation inside the drier is done with the help of turbo blower run with the help of 1 HP motor with 1440 RPM. The motor is placed on M.S. frame at the outer side of the back wall at center position keeping the shaft of the motor inside the drier. The turbo blower with 35 cm diameter is fitted on the motor shaft. Two Nos. moisture outlets of size 20cm x 15 cm are provided on the top cover of the drier. There is also provision for closing the outlets. Two Nos. of the air inlets are provided at the bottom portion of the sidewalls. Size of the air inlets is 8 cm x 8 cm and also provided with baffle plates for closing the inlets when required.

5. Chimney: One chimney of 10 cm diameter and 180 cm height made of 20 gauges M.S. sheet is placed on the oven inside the drier and goes through the top cover.
